

# Write-Up: Interactive Web Games

## Overview

These two interactive web-based games developed using **HTML, CSS, and JavaScript**:

1. **Catch the Man Game**
2. **Style the Woman Game**

## Purpose of the Project

The purpose of these games is to:

- Introduce **interactive web design**
- Demonstrate how **JavaScript controls user interaction**
- Build understanding of **event handling and dynamic content**
- Encourage creativity through game-based learning

## Game 1: Catch the Man

### Description

The **Catch the Man Game** is a reaction-based game where a character moves randomly within a game area. The player must click on the character as quickly as possible to increase their score.

### How It Works

- A man emoji appears inside a game box
- The character moves to a random position at regular intervals
- Each successful click:
  - Increases the score
  - Moves the character again
- The goal is to achieve the highest score possible

## Key Features

- Random movement using JavaScript
- Click detection using event listeners
- Real-time score updates
- Timed movement using intervals

## Catch the Man (Upgrade Ideas)

- Increase speed over time
- Add timer (10 seconds)
- Add “Miss penalty”
- Change emoji randomly

# Game 2: Style the Woman

## Description

The **Style the Woman Game** is a creative interaction game where the player customizes a character by changing colors and styles while increasing a style score.

## How It Works

- A woman character is displayed on the screen
- The user clicks buttons to:
  - Change outfit color
  - Change background color
- Each action increases the style score
- The goal is to experiment with different styles and achieve a high score

## Key Features

- Interactive buttons

- Dynamic style changes using JavaScript
- Random color selection
- Live score tracking

## **Style the Woman (Upgrade Ideas)**

- Add hairstyle options
- Add accessories –hat, bag, shoes
- Add “fashion rating” system
- Save style using localStorage
