

Project: “Hotel Management Website System”

Project Description

The **Hotel Management Website System** is an interactive web application built using **HTML, CSS, and JavaScript** that allows users to **view rooms, make bookings, and manage reservations**.

This project simulates a real hotel website with features such as:

- Room listings
- Booking system
- Customer details
- Reservation management

Purpose of the Project

- Build a **multi-section functional website**
- Work with **forms and data validation**
- Store and manage data using **localStorage**
- Create a **real-world booking system**
- Improve UI/UX design skills

Key Features

View available rooms
Book a room
Store bookings (localStorage)
Display booking history
Delete/cancel bookings
Dynamic updates without refreshing page

Website Structure

The website includes:

1. **Home Section** → Welcome page
2. **Rooms Section** → List of available rooms
3. **Booking Section** → Booking form
4. **Bookings Dashboard** → View/manage reservations

Challenges

Challenge 1: Add Room Availability System

Prevent double booking on same date

Challenge 2: Calculate Total Price

Based on room type:

- Single → R500
- Double → R800
- Suite → R1500

Challenge 3: Add Login System

Only logged-in users can book

Challenge 4: Search & Filter

Filter bookings by:

- Name
- Date
- Room type

More Challenge (Advanced)

Convert into **multi-page system**:

- Home page
- Booking page
- Admin dashboard

Add:

- Edit booking
- Payment simulation
- Dark mode
- Mobile responsive design

What You Built

You now have a:

- **Real hotel system simulation**
- **Booking management app**
- **Data-driven website**
