

Project: “Login & Dashboard Website”

Project Description

The **Simple Login & Dashboard Website** is a beginner-friendly web application that allows users to **log in with a username and password** and access a protected dashboard.

This project simulates how real websites handle login systems (in a simplified way using JavaScript). It helps learners understand authentication concepts, user input handling, and page control.

Purpose of the Project

This project helps learners:

- Understand how login systems work
- Practice working with **forms and validation**
- Learn how to **control what users can see**
- Use JavaScript to create **real-world functionality**

Features

Login form
Username & password validation
Error messages
Show/hide dashboard
Logout button
Session stored using browser storage

Intermediate Challenge (Upgrade the System)

Challenge: “Multi-User Login + Personalized Dashboard”

Upgrade your system to:

1. Support Multiple Users
2. Display Username after Login
3. Store Logged-In User
4. Add “Remember Me” Checkbox

If checked → stay logged in

If not → logout on refresh

5. Add Lockout System

After 3 wrong attempts:

What You Built

You now have:

- A **login system**
- A **protected dashboard**
- Real understanding of:
 - Authentication basics
 - Local storage
 - User validation
